FEATURED PROJECTS

FarmCore - Dairy Farm Management System

Node.js | PostgreSQL | React | Docker

A farm analytics platform that transforms daily farm operations into measurable business intelligence. Consolidates data across livestock management, milk production, feed utilization, animal health records, breeding activities, and farm expenditures into a single source of truth for farm performance. Interactive dashboards surface real-time KPIs, productivity trends, cost metrics, and exception alerts, giving farm managers the visibility to make evidence-based decisions on herd performance, feed efficiency, disease incidence, and operational profitability. Designed

PROFESSIONAL SUMMARY

Data Analyst and Analytics Engineer with degrees in Statistics and Computer Science and experience spanning government data operations, statistical consulting, business intelligence, and reporting automation. Skilled in Python, SQL, Power BI, SPSS, Stata, and R, with a strong foundation in statistical analysis, dashboard development, ETL workflows, and data-driven decision making. Experienced in transforming complex datasets into actionable insights across education, public sector, and SME environments.

PROFESSIONAL EXPERIENCE

Freelance Data Analytics Consultant

Jan 2023 - Present

Self-Employed, Remote

- Deliver data analytics, statistical consulting, and reporting solutions for SMEs, education organizations, researchers, and entrepreneurs across East Africa and Southeast Asia.
- Clean, transform, validate, and analyze datasets using Python, SQL, Excel, R, SPSS, and Stata across diverse client engagements.
- Design and deploy interactive Power BI and Looker Studio dashboards for business performance monitoring and operational reporting.
- Automate recurring reporting workflows using Python scripts and scheduled processes, reducing manual reporting effort by approximately 60-70% for clients.
- Perform survey analysis, hypothesis testing, regression modelling, and quantitative research support for academic and business clients.

SELECTED CLIENT ENGAGEMENTS

Retail Performance Dashboard

- Built Power BI dashboards integrating sales and inventory data.
- Automated weekly KPI reporting and trend analysis.
- Surfaced insights on inventory movement and peak periods.

Customer Retention Analysis

- Analyzed transaction data to identify high-risk segments.
- Applied RFM analysis and cohort segmentation.
- Produced retention recommendations with statistical evidence.

Education Analytics Dashboard

- Built dashboards tracking grades and assessment outcomes.
- Created early-warning indicators for student intervention.
- Automated performance monitoring and reporting.

Probability and Statistics Instructor

May 2023 - Present

Sarasas Witaed Chiang Mai School, Thailand

- Applied statistical concepts including probability distributions, regression analysis, hypothesis testing, and inference in an instructional context, reinforcing practical analytical reasoning.
- Designed and maintained a structured student assessment database to track grades, attendance, and performance indicators across multiple cohorts.
- Developed automated gradebook and performance tracking systems using Excel and Google Sheets, reducing manual reporting effort by approximately 50%.
- Analyzed assessment data to surface performance trends, identify at-risk students, and produce data-driven reports supporting academic planning decisions.
- Built spreadsheet-based KPI dashboards for student performance monitoring, providing academic leadership with visibility into cohort outcomes.

Freelance Software Developer and Cloud Consultant

Jan 2024 - Present

Self-Employed, Remote

- Developed data collection systems and backend reporting services that automated ingestion of operational data into structured databases for analysis.
- Designed and implemented database schemas supporting analytics workflows, improving data availability and query performance for reporting use cases.
- Deployed cloud infrastructure on AWS to host data pipelines and reporting applications, ensuring reliable availability of analytics outputs for clients.
- Built ETL processes and automated data workflows using Python and PostgreSQL, reducing time from raw data to analysis-ready datasets.

Data and Research Intern

Jun 2022 - Dec 2022

around structured daily data collection, historical trend analysis, and performance reporting.

Job Intelligence Pipeline

Python | SQL | Workflow Automation | Data Scoring

Automated data ingestion and scoring pipeline that aggregates job postings from multiple sources, cleans and deduplicates records, applies relevance scoring and rule-based ranking against a target profile, and delivers a ranked daily digest for review. Emphasizes structured data collection, automated reporting, and decision support through consistent, filtered intelligence rather than manual searching.

REFERENCES

Available upon request.

Meru County Revenue Board, Kenya

- Supported data entry, validation, and reconciliation of county revenue records using Excel and Microsoft Access.
- Prepared revenue summaries and Excel-based reports tracking monthly collection performance across categories.
- Assisted in digitizing physical records and maintaining organized documentation for the finance team.
- Assisted in identifying and correcting data inconsistencies during revenue record reconciliation activities.
